NYKO GABRIELLE A. LOPEZ

Nykolopez25@gmail.com | github.com/Nykqwer | linkedin.com/in/nykogabriellelopez | +639553984574

Summary

Full Stack Web Developer with experience building full-stack web applications that solve operational and user-experience problems. Skilled in React, TypeScript, Next.js, Node.js, PHP, and PostgreSQL, with a focus on secure APIs, data-driven systems, and responsive UI. Delivered production-ready full-stack applications including role-based management systems

Education

South East Asian Institute of Technology Inc. 2024 - 2025
Bachelor of Science in Information Technology
Thesis: Tupi Residential Information and Employee Management System

Skills

- **Front-End:** React, TypeScript, Next.js, EJS, Tailwind CSS, Bootstrap, HTML, CSS, JavaScript
- **Back-End:** PHP, Node.js, Express.js,
- **Database:** MySQL, PostgreSQL, Supabase
- **Other / Tools:** Postman, Figma

Experience

Freelance Web & Application Developer | Tech: JavaScript, PHP, Python(Tkinter), Java(NetBeans), Figma, MySQL 2021 - 2024

Created and delivered custom websites and small projects, handling design, development, and deployment. Designed and deployed 10+ client websites, improving user accessibility and optimizing performance

Highligted Projects

The Wild Oasis Cabin Booking System | Full-Stack Developer

Tech: Next.js, TypeScript, Supabase, TailwindCSS, NextAuth

- Engineered a full-stack cabin reservation platform with secure authentication, protected routes, and server-side actions for reliable session handling.
- Designed and optimized relational database schemas for guests, cabins, and bookings, ensuring efficient data retrieval and integrity.
- Implemented dynamic booking logic including date validation, automatic price calculation, and real-time availability management.
- Developed responsive, user-centered interfaces for guest account management and cabin administration using modern UI practices.
- Strengthened application security through structured access control and secure data handling practices.

Damdamin – Mood Journal & Emotion-Aware Note System | Full-Stack Developer

Tech: React, TypeScript, Tailwind CSS, Node.js, PostgreSQL.

- Engineered a full-stack emotion-aware journaling platform with real-time note management and persistent user data storage.
- Implemented keyword-based sentiment classification logic to automatically detect and categorize user moods from journal entries.
- Designed and integrated a rule-based advice recommendation system that delivers personalized feedback upon submission.
- Developed RESTful APIs and structured PostgreSQL schemas to ensure reliable data persistence and efficient querying.
- Built a responsive and interactive UI with optimized state management, enhancing user experience and application performance.
